New Unit Exchange Program Overview

The Transmission Unit Exchange Program was created to make ordering Reman, New, or New Unit Exchange units a simple process. Please carefully read the details of this program before continuing into the interchange section of this book.

This book is organized in a way to help you order all the parts needed when ordering a Reman, New, or New Exchange Unit.

This book is divided into 15 sections:

1. Introduction and Explanation of Service Unit Exchange Program.
2. Unit identification – Locating Transmission Tag and Identifying Model Designation.
3. Unit identification – How to identify a unit when the identification tag is missing.
4. Options identification – How to identify various options the transmission may currently have, and whether or not a service unit for those options is available.
5. Clutch Housing identification – How to determine the part number of a clutch housing.
6. Transmission Interchange – How to determine the part number for Reman, New Unit, or New Exchange Unit by model.
7. Identification chart for RT-8609, RT-7608LL, RT/RTO-6610, or RT/RTO-6613 (Chart A) – To order the Reman version of these three models, identify the input shaft and front bearing cover.
8. Conversion Chart (Chart B) – When the current model is replaced by a Reman, New, or New Unit Exchange model that has a ratio or length change, refer to this section.
9. Recommended Stocking Guide – Clutch housings and/or shift bar housing assemblies.
10. Quick Reference Guide – To identify the model or "TA" number.
11. Accessories – To order various accessories for your Reman, New, or New Exchange Unit. This section lists part numbers for accessories by model.
12. Output Yoke Chart (Chart C) – Describes how to determine the yoke series, and part number.
13. Speedometer Parts – To order new speedo parts for your Reman, New, or New Exchange Unit. This section is divided into Mechanical and Magnetic sections.
14. Shipping weights.
15. Transmission Oil Capacities.

Introduction and Explanation

This book contains information needed to cross reference most Fuller transmission models produced between the years 1985 and 1998. With this book you will have the ability to order and/or stock a Reman, New, or New Exchange Unit to meet customer requirements. This book groups all units together, based on speed and model, and it references SERVICE UNIT part numbers to be used when ordering or stocking service units.

In addition to offering a complete transmission interchange, this catalog contains information helpful in cases where it may be necessary to order other components when ordering a Reman, New, or New Exchange Unit. For example, in the Accessories Section you can look for a specific yoke application, push-in sensor rear bearing cover assembly, master valve with a generic medallion, generic medallion only, master valve with shift diagram medallion, shift diagram medallion only, or shift label only for ANY particular model. Other accessories covered are: service lever assemblies, Roadranger valve repair kits, and speedometer parts.

As stated above, there are three types of replacement units – Reman, New, or New Exchange. All Reman and New Exchange units have a CORE CHARGE. Please see publication APSL0419 for core and warranty details.

These units are “All-Makes” in nature, meaning they are ALL built with a Service Shift Bar Housing (with provisions for neutral light switch, reverse light switch, and breather), and a Service Rear Bearing Cover (with provisions for BOTH mechanical and magnetic pickups). Most service units are built standard with a 2" pull-type input shaft.

Most Service Units can be purchased with an integral oil pump option.

Please note that New and New Exchange Units are shipped WITHOUT a Clutch Housing. Reman units will continue to be shipped WITH a SAE #1 Clutch Housing (or SAE #2 for 6600 model series).

Information contained in this publication is also available on the Eaton web site: <http://truck.eaton.com> and on a CD-ROM called Specranger. Copies of Specranger can be obtained by contacting your local Eaton Roadranger Parts Marketing District Manager. For more information, call 1-800-826-HELP, (826-4357).

Unit Identification For Unit With Transmission Tag

Unit Identification For Unit With Transmission Tag

The first step in the process of ordering a service unit is determining the current model. There are two ways to do this. The first way is to locate the tag on the side of the transmission and identify its model designation. The second way is, if the unit does not have a tag follow the transmission identification chart in the next section to determine the model. When the current model is identified, proceed to Transmission Interchange Section.

Locating Transmission Tag and Identifying Model Designation

Transmission model designation (i.e. RT-12609A), and other transmission identification information, are stamped on the transmission tag. To identify the transmission model designation (nomenclature), locate the tag on the transmission and then locate the model designation number as shown.

Heavy Duty Models

Using Model Designation or Nomenclature

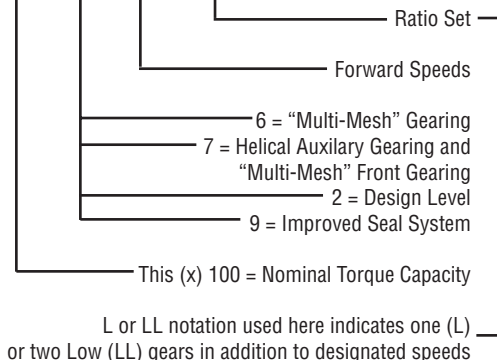

The model designation or nomenclature assigned to a transmission model provides information concerning transmission torque capacity, forward speeds, ratio set, shift bar housing and other provisions and options. Use the following guidelines to identify your transmission model designation.

Heavy Duty Transmission - Nomenclature

Eaton® Fuller® Model Designation Prefix
See options below:

Prefix	Definition
T	Twin Countershaft
TX	w/Overdrive
RT	Roadranger® Twin Countershaft
RTF	w/ Forward Shift Bar Housing
RTO	w/ Overdrive
RTOF	w/ Overdrive and Forward Shift Bar Housing
RTX	w/ Overdrive and Direct Shift Pattern
RTXF	w/ Overdrive, Direct Shift Pattern and Forward Shift Bar Housing
FR	Fuller® Roadranger® Twin Countershaft
FRF	w/ Forward Shift Bar Housing
FRO	w/ Overdrive
EROF	w/ Overdrive and Forward Shift Bar Housing

R T O - 1 1 9 0 9 M L L

"Super" Transmissions

R T L O F* - 1 4 6 1 0 A

* Transmission nomenclature may indicate a Standard (RTLO) or Forward (RTLOF) Mounted Shift Tower.

Transmission Interchange Section Header Descriptions

Before continuing into the main interchange section of this catalog, read below for header explanation.

Model:

Find your transmission model on the metal serial tag, please refer to page 4 for locating the serial tag. If the tag is missing, see the Transmission Identification Chart to determine the transmission model. Many options are not identified in the model number of the transmission. For proper identification of which options your transmission may have, please see the Options Chart.

NOTE: Models listed in the MODEL column that have an "*" after the model listing are NOT eligible for a core return credit.

Reman Unit Model Designation:

Reman models currently available.

Reman Unit Part Number Without Integral Oil Pump:

Reman transmission models include an SAE #1 standard clutch housing, except the 6600 series, which includes an SAE #2 standard clutch housing. Reman units purchased require a core return (Except in cases where an "*" appears beside the Model listed, means NO CORE VALUE. For core and warranty details, please refer to publication #ASPL0419.

Many Fuller Transmissions are built today with an integral oil pump. This option is not indicated on the original transmission's identification plate. Please see the Options Chart to determine whether an integral oil pump is present. Integral oil pump options for all Reman, New and New Exchange Units are indicated by a suffix of "11" – indicating NO PUMP, or "12" – indicating PUMP. Part numbers for Reman transmissions are all followed by an "R". For example: the Reman part number for an RTX-12609A without an integral oil pump would be TA-830-11R.

Reman Unit Part Number With Integral Oil Pump:

Reman transmission models include an SAE #1 standard clutch housing, except the 6600 series, which includes an SAE #2 standard clutch housing. Reman units purchased require a core return (Except in cases where an "*" appears beside the Model listed, means NO CORE VALUE. For core and warranty details, please refer to publication #ASPL0419.

As an extra cost option, an integral oil pump can be ordered on most Reman transmission models. Many Fuller Transmissions are built today with an integral oil pump. This option is not indicated on the original transmission's identification plate. Please see the Options Chart to determine whether an integral oil pump is present. Integral oil pump options for all Reman, Unit Exchange and New Service Units are indicated by a suffix of "11" – indicating NO PUMP, or "12" – indicating PUMP. Part numbers for Reman transmissions are all followed by an "R". For example: the Reman part number for an RTX-12609A with an integral oil pump would be TA-830-12R.

Service Unit Model Designation:

This is the list of New Service models currently available in production.

Service Unit Part Number Without Integral Oil Pump:

New Service Units are shipped **without** clutch housings. To determine the proper clutch housing to order, please refer to the Clutch Housing Identification Section. These units include a service rear bearing cover (with provisions for both mechanical AND magnetic speedometer pickups), and service shift bar housing (with provisions for neutral light switch, reverse light switch, and breather). As an extra cost option, an integral oil pump can be ordered on most New, and New Exchange transmission models. Many Fuller Transmissions are built today with an integral oil pump. This option is not indicated on the original transmission's identification plate. Please see the Options Chart to determine whether an integral oil pump is present. For warranty details, please refer to publication #ASPL0419. Integral oil pump options for all Reman, Unit Exchange, and New Service Units are indicated by a suffix of "11" – indicating NO PUMP, or "12" – indicating PUMP. For example: the New Service Unit part number for an RTX-12609A without an integral oil pump would be TA-830-11.

Service Unit Part Number With Integral Oil Pump:

New Service Units are shipped **without** clutch housings. To determine the proper clutch housing to order, please refer to the Clutch Housing Identification Section. These units include a service rear bearing cover (with provisions for both mechanical AND magnetic speedometer pickups), and service shift bar housing (with provisions for neutral light switch, reverse light switch, and breather). As an extra cost option, an integral oil pump can be ordered on most New, and New Exchange transmission models. Many Fuller Transmissions are built today with an integral oil pump. This option is not indicated on the original transmission's identification plate. Please see the Options Chart to determine whether an integral oil pump is present. For warranty details, please refer to publication #ASPL0419. Integral oil pump options for all Reman, Unit Exchange, and New Service Units are indicated by a suffix of "11" – indicating NO PUMP, or "12" – indicating PUMP. For example: the New Service Unit part number for an RTX-12609A with an integral oil pump would be TA-830-12.

Service Unit Exchange Part Number Without Integral Oil Pump:

New Service Units are shipped without clutch housings. To determine the proper clutch housing to order, please refer to the Clutch Housing Identification Section. These units include a service rear bearing cover (with provisions for both mechanical AND magnetic speedometer pickups), and service shift bar housing (with provisions for neutral light switch, reverse light switch, and breather). As an extra cost option, an integral oil pump can be ordered on most New and New Exchange transmission models. Many Fuller Transmissions are built today with an integral oil pump. This option is not indicated on the original transmission's identification plate. Please see the Options Chart to determine whether an integral oil pump is present. A core value for new service units is the amount you will be billed if an acceptable core is not returned against the purchase of a New Exchange Transmission (Except in cases where an "*" appears beside the Model listed, means NO CORE VALUE). For core and warranty details, please refer to publication #ASPL0419. Integral oil pump options for all Reman, Unit Exchange, and New Service Units are indicated by a suffix of "11" -- indicating NO PUMP, or "12" – indicating PUMP. Part numbers for Service Unit Exchange transmissions are all followed by an "X". For example: the Service Unit Exchange part number for an RTX-12609A without an integral oil pump would be TA-830-11X.

Service Unit Exchange Part Number With Integral Oil Pump:

New Service Units are shipped without clutch housings. To determine the proper clutch housing to order, please refer to the Clutch Housing Identification Section. These units include a service rear bearing cover (with provisions for both mechanical AND magnetic speedometer pickups), and service shift bar housing (with provisions for neutral light switch, reverse light switch, and breather). As an extra cost option, an integral oil pump can be ordered on most New and New Exchange transmission models. Many Fuller Transmissions are built today with an integral oil pump. This option is not indicated on the original transmission's identification plate. Please see the Options Chart to determine whether an integral oil pump is present. A core value for new service units is the amount you will be billed if an acceptable core is not returned against the purchase of a New Exchange Transmission (Except in cases where an "*" appears beside the Model listed, means NO CORE VALUE). For core and warranty details, please refer to publication #ASPL0419. Integral oil pump options for all Reman, Unit Exchange, and New Service Units are indicated by a suffix of "11" – indicating NO PUMP, or "12" – indicating PUMP. Part numbers for Service Unit Exchange transmissions are all followed by an "X". For example: the Service Unit Exchange part number for an RTX-12609A with an integral oil pump would be TA-830-12X.

Is Service Unit Same Length and PTO Speed As Model?:

If your model supersedes to a different new or new exchange model, please check this column to verify if the new model will not have any fit-up differences with regard to overall unit length and whether or not there is any differences in the PTO speed. If "NO", please see the Conversion Chart B for details.

See Conversion Chart?:

If "YES", then the new service unit will have ratio changes. Please refer to the Conversion Chart B (conversion chart B is arranged by model and speed). The ratios for both the model that is being replaced and the service unit are listed for comparison. Changing ratios can affect startability, road speed, and steps between gears. Also listed are weights, overall lengths, and PTO speeds as a % of engine speed.

Output Yokes (Chart C)

To determine the proper part number to order for a new yoke, the following information is required.

1. What STYLE? – Half round, Full round, or Flange (See Figure 1)
2. What SERIES? – To determine series, take 3 measurements (See Figure 2) and apply them to Table 1 below.
3. What APPLICATION NUMBER? – To determine application number, refer back to the accessories section. Find the model you are fitting with the yoke and locate the number in the column with the heading “Model Yoke Application”.
4. Once Style, Series and Application Number have been determined, continue to Chart C to locate the corresponding application number section. Within each application number section you can order a yoke either with or without a slinger, based on style, series, tapped, or non-tapped holes. The current seal system utilizes the yoke with slinger design. All units shipped are to this design level (yoke w/slinger).
