FCC COMPLIANCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Introduction

Thank you for purchasing a StarTech.com two or four port StarView KVM switch with audio. You can now connect your computers to a single keyboard, mouse, monitor, microphone, and speakers, sparing you the clutter of extra consoles or peripherals. The switch is up and running with only a few simple cable connections, and switching between computers is as easy as a push button or hot-key combination.

Features

- Supports most microphones and speakers
- Supports hot-plugging of PS/2 keyboards or mice
- Works with M/S Intellimouse (Pro), Explorer, optical mice
- Performs sequential auto-scan of all computers
- Saves and restores keyboard states when switching computers
- Acts independently of operating system
- Supports high VGA resolution of 1920x1440 (DDC2B compatible)
- Backed by StarTech.com's one year warranty

Before You Begin

To ensure a quick and easy switch installation, please read through this section carefully before attempting to install the switch.

System Requirements

- IBM compatible computers
- One monitor (must be capable of synchronizing with each computer's video signal. Check your monitor's user manual for more information)
- One PS/2 keyboard and mouse
- One set of speakers
- One microphone

Contents

This package should contain:

- 1 x KVM switch
- **SV211KA:** 2 x 6 ft (1.8m) 3-in-1 cable set, 4 x 6 ft (1.8m) custom audio cable set
- **SV411KA:** 4 x 6 ft (1.8m) 3-in-1 cable set, 8 x 6 ft (1.8m) custom audio cable set

Installation

This section will guide you through the installation of your KVM switch. Please read through the instructions carefully and complete each step in the order listed.

NOTE: Make sure that all devices are turned off before beginning installation.

Connecting the switch

1. Plug your monitor into the labeled HDB-15 port on the left side of the back of the switch.
2. Plug your PS/2 keyboard and mouse into the labeled mini-DIN-6 ports on the right side of the switch.
3. Plug your speakers and microphone into the labeled ports on the left side of the back of the switch.

Connecting the computers

1. Connect the single end of the 3-in-1 cable into an open HDB-15 port on the back of the switch.
2. Plug the blue monitor, purple keyboard, and green mouse cables into the ports on the back of the computer.
3. Plug one end of the pink microphone cord into the mic port on the switch and the other end into the mic port on your computer.
4. Plug one end of the green speaker cord into the speaker port on the switch and the other end into the speaker port on your computer.

Repeat steps 1-4 for any other computers you want to connect to the switch. Your KVM switch is now ready for use.

Using Your KVM Switch

NOTE: Only the **LEFT** Control key works for hot-key sequences.

Switching Computers

The LEDs on the front panel of the switch indicate which computer is active. To switch between computers, either use the push-button on the front of the switch to scroll through the computers, or hit the left Control key twice followed by the port number (for example, to select the computer plugged into port 2, type left Ctrl + left Ctrl + 2).

Using Auto Scan

When auto scan mode is started, the switch will automatically scan through the attached computers at user-defined intervals. Any keyboard or mouse activity will suspend the auto scan, but once the activity ceases, auto scan will begin again.

- To start auto scan, type left Ctrl + left Ctrl + F1.
- To end auto scan, type left Ctrl + left Ctrl.
- To adjust the scan rate, type left Ctrl + left Ctrl + F3 and choose between 3 (default), 8, 15, or 30 seconds.

Manual Scan

To manually scan back and forth between computers, type left Ctrl + left Ctrl + F2. Use the up and down arrow keys to select the previous or next computer. Pressing any other key will abort the manual scan.

Keyboard Rates

To adjust the keyboard typematic rate, type left Ctrl + left Ctrl + F4 and select from 10 (default), 15, 20, or 30 characters/second.

NOTE: This will override the typematic rate set in your BIOS or operating system.

Troubleshooting

If you encounter any problems, first make sure all cables are firmly seated at both ends and connected to their proper ports.

Problem: Keyboard or mouse doesn't work.

Cause: Improper power-up sequence. Keyboard or mouse has not initialized properly.

Solution: Press and hold the push-button for 3 seconds. This switch will reinitialize the device. If the problem persists, unplug the device, wait a few seconds, and plug it back in. Also remember that the switch does not support serial mice.

Problem: Keyboard error while booting up.

Cause: Loose keyboard connection.

Solution: Make sure keyboard cables are well-seated and in its proper ports.

Problem: Keyboard strokes are shifted.

Cause: The computer was in a shifted state when last switched.

Solution: Press both Shift keys.

Problem: The switch occasionally fails to function.

Cause: Computers are not supplying enough power.

Solution: Connect a DC 9V 500mA power adapter (not included) to output jack.

Problem: Scan or Typematic rate has changed.

Cause: All connecting computers were turned off and the switch has reset to default settings.

Solution: Manually set the rates again and keep at least one computer on at all times.
